

WONY GYEONGWON SONG

Data Analyst | Data Engineer | Analytics Engineer

- wony.gsong@gmail.com • Milan, Italy
- github.com/gyngwon • linkedin.com/in/gyeongwon

PROFILE

Data analyst and engineer with hands-on experience building cloud-based data pipelines, designing analytical dashboards, and applying ML models to real-world datasets. Experienced at Euronext Securities Milan working with AWS data infrastructure (Kinesis, Glue, S3, Redshift, Athena), real-time financial data, and cross-functional stakeholder reporting in an Agile environment. Holds an MSc in Computational Data Science with strong skills in Python, SQL, GCP, and BI tools. Business-oriented with domain exposure across financial services and B2B sales operations. Proactive, detail-oriented, and comfortable working independently in international teams.

SKILLS

Data Engineering: ETL/ELT Pipelines, Streaming & Batch Processing (Apache Kafka, Spark), Data Modeling, Data Quality & Validation
Cloud & Infrastructure: AWS (Kinesis, Glue, S3, Redshift, Athena, Lambda), GCP (BigQuery, Cloud Composer, Dataflow), Docker, CI/CD (Jenkins)
Analytics & BI: SQL, Python (Pandas, NumPy, Matplotlib, Scikit-learn), Tableau, Power BI, Looker, KPI Frameworks, Dashboard Design
Tools & Collaboration: Git, GitLab, GitHub, Jira, Agile/Scrum; Excel (Pivot Tables, VLOOKUP, advanced formulas); stakeholder communication

EXPERIENCE

Inside Sales Intern | LG Chem Europe GmbH

Aug 2026 – Present | Milan, Italy

- Supported Inside Sales operations at a global B2B chemical company, handling customer account management tasks including balance confirmations, A/R follow-up, and credit limit registration.
- Assisted in customer development activities and prepared structured summaries of market news and industry trends for internal stakeholders.
- Collaborated with sales and finance teams in a multicultural environment, communicating effectively in English across organizational levels.

Data Engineer Intern | Euronext Securities Milan (Borsa Italiana)

Jan 2025 – Dec 2025 | Milan, Italy

- Contributed to designing and implementing data pipelines on AWS (Kinesis, Glue, S3, Redshift, Athena), supporting real-time and batch ingestion and transformation of large-scale financial datasets.
- Participated in structured data validation workflows, tracing data across pipeline stages and conducting root-cause analysis on quality issues including null handling, schema mismatches, and column errors.
- Assisted in building SQL-based data models, stored procedures, and Redshift views supporting data mart reporting and downstream analytics.
- Contributed to Tableau dashboard development for real-time financial performance monitoring and management reporting.
- Collaborated in Agile sprints with engineers and analysts; managed version control via GitLab and tasks via Jira.
- Worked on a thesis project investigating the cloud migration of a Liquidity Dashboard, proposing an AWS-based architecture (Kinesis, Glue, Redshift, Athena) and redesigning Tableau dashboards.

Student Research Assistant | Mokpo National University

Jul 2020 – Jan 2021 | South Korea

- Supported a Big Data Platform research project, contributing to data collection, cleaning, and visualization using Python (Pandas, Matplotlib).

PROJECTS

Real-Time Weather Monitoring System — Apache Kafka, Spark Structured Streaming, MySQL, Docker

- Built a streaming pipeline using Kafka and Spark to ingest live sensor data and compute real-time KPIs with time-series aggregation.
- Implemented data quality checks across pipeline stages and containerized the full stack using Docker.

GCP Cricket Statistics Data Pipeline — Cloud Composer (Airflow), Dataflow, BigQuery, Looker

- Designed a modular GCP pipeline from API ingestion through Dataflow transformation to BigQuery storage and Looker dashboard delivery.
- Automated scheduling via Cloud Composer (Airflow) and maintained version control via Git throughout development.

Diabetes Prediction & Anomaly Detection — Python — Logistic Regression, Random Forest, Autoencoder

- Applied ML models for classification and anomaly detection on a real-world dataset, covering feature engineering, model evaluation, and communicating findings to non-technical audiences.

Spotify Automated ETL — AWS Lambda, S3, Glue, Athena, EventBridge

- Built an automated event-driven pipeline on AWS extracting and transforming data from a public API, making it queryable via Athena.

EDUCATION

MSc Computational Data Science — University of Bozen-Bolzano, Bolzano, Italy

BSc Software Engineering — Mokpo National University, Mokpo, South Korea

TRAINING

AWS Cloud School: Python, Linux, Docker, Kubernetes, CI/CD (Jenkins), AWS Builder Labs

LANGUAGES

English (Full Professional Proficiency) • Italian (Basic – currently improving) • Korean (Native)
