EXPERIENCE

Inside Sales Intern | LG Chem Europe GmbH

Aug 2026 – Present | Milan, Italy

- Support European sales operations, including customer registration, credit limit registration, balance confirmation, and A/R follow-up.
- Prepare market and industry trend summaries and coordinate customer-related information with internal teams.

Data Engineer Intern | Euronext Securities Milan (Borsa Italiana)

Jan 2025 – Dec 2025 | Milan, Italy

- Contributed to the development and maintenance of Python-based ETL pipelines on AWS (Kinesis, Glue, S3, Redshift) to ingest, transform, and load data from multiple internal and external sources.
- Designed and optimized SQL data models, views, and data marts (DataMart) powering KPI reporting and management analytics.
- Developed Tableau dashboards aggregating multiple data sources into consolidated views for management and business stakeholders.
- Automated recurring data workflows and validation checks, improving pipeline reliability and reducing manual effort.
- Standardized KPI definitions across use cases and ensured data quality, consistency, and validation across all sources.
- Collaborated with business stakeholders in Agile sprints, using Jira for requirements management and issue tracking.

Student Research Assistant | Mokpo National University

Jul 2020 – Jan 2021 | Mokpo, South Korea

- Contributed to a Big Data Platform project covering data collection, cleaning, and visualization using Python (Pandas, Matplotlib).

SKILLS

Languages: Python, SQL

Cloud: AWS (S3, Glue, Athena, Redshift, Lambda), GCP (BigQuery, Dataflow)

Data Engineering: ETL/ELT, Data Modeling, Data Marts, dbt, Airflow, Batch & Streaming

Processing: PySpark, Kafka, Pandas

BI & Analytics: Power BI, Tableau, Looker, KPI Definition, Excel

DevOps & Databases: Docker, GitHub Actions, Linux, PostgreSQL

EDUCATION

MSc Computational Data Science — University of Bozen-Bolzano, Bolzano, Italy

BSc Software Engineering — Mokpo National University, Mokpo, South Korea

PROJECTS

Credit Risk Analytics Pipeline — [GitHub](#)

- Built an end-to-end analytics engineering pipeline transforming Lending Club loan data into analytics-ready datasets using a medallion-style architecture (raw → staging → intermediate → mart).
- Modeled a Star Schema data mart with dbt, including 17 automated data-quality tests, and orchestrated the workflow with Apache Airflow; deployed the same models across DuckDB (dev) and BigQuery (prod) using incremental materialization and GitHub Actions CI/CD.
- Delivered a Power BI dashboard enabling multi-dimensional risk analysis across borrower, credit-profile, and loan-product dimensions.

GCP Data Pipeline (BigQuery + Looker) — [GitHub](#)

- Automated an end-to-end pipeline on Google Cloud (Cloud Composer / Airflow, BigQuery) ingesting API data daily and transforming it into analytics-ready tables.
- Built interactive Looker dashboards on the BigQuery models for self-serve reporting and analytics.

Real-Time Weather Monitoring System — [GitHub](#)

- Built a real-time streaming pipeline (Apache Kafka, Spark Structured Streaming, Docker) computing derived KPIs and time-windowed aggregations from live API data, persisted to MySQL and served in a Streamlit dashboard.

LANGUAGES

English (Full Professional Proficiency) • Italian (Currently studying) • Korean (Native)
